CORRECTIVE JAW SURGERY EVALUATION

Re: Rohan Khattar Krishnan, #161122

HISTORY

CHIEF COMPLAINT

Aesthetic purposes

HISTORY OF PRESENT ILLNESS

20-year-old M here for a corrective jaw surgery evaluation. He has had previous orthodontic treatment in the past.

Medications: Minoxidil, Finasteride

Allergies: None

Health Alerts: Had General Anesthesia - Wisdom teeth, broken arm, Under care of physician for - General

Exam

General: _

Frontal Evaluation

Mx1 midline -	Coincident with facial midline
Md1 midline -	Left
Mx. Cant 3 to 3 -	[right superior]
Alar base width (mm) -	39 mm
Upper lip length (mm)-	19 mm
Lips relaxed Mx1 exposure (mm)-	3m
Mx1/spontaneous smile gingiva exposure (mm/mm)-	10/0 mm

Profile Evaluation

Mx1 vs. GALL -	Posterior
Chin -	Posterior

TMJ Evaluation

Maximum interincisal opening -	40 mm
--------------------------------	-------

Intraoral Evaluation

Dentition-	Without obvious caries
Overjet -	3 mm
Overbite -	3 mm
Angles Classification -	Class I

CBCT

TMJ survey-	Without arthrosis or resorption
Min axial airway (square mm)-	76 squared mm
Rendered Lateral Ceph -	ANB 3 Wits Appraisal 0 U1 vs. OP 63 L1 vs. OP 75

Models

Date of models -

Today

SUMMARY OF FINDINGS

- Horizontal maxillary hypoplasia
- Horizontal mandibular hypoplasia
- Class I dental relationship

ICD-10 CM M26.02

ICD-10 CM M26.04

ICD-10 CM M26.211

SURGICAL TREATMENT CONSIDERATIONS

- Midface reconstruction, Le Fort I maxillary osteotomy with graft **CPT code 21145**
- Mandibular reconstruction, bilateral sagittal osteotomies of the mandibular ramus with rigid fixation **CPT code 21196**
- 3-D virtual surgical planning and interocclusal surgical guides **CPT code 21085**
- Horizontal anterior mandibular osteotomy **CPT code 21121**

DISCUSSION

The diagnosis and the proposed surgical plan were discussed. Surgery was explained using computer simulations and animations from Dolphin Imaging. The anticipated recovery process was discussed, and the potential surgical side effects and risks were reviewed, including but not limited to altered sensation that could be permanent, infection, complications associated with bleeding, jaw joint dysfunction, devitalization of teeth, and treatment instability.

Cordially,

Benjamin Walline DDS MD
